Bilingual (Fluent in French) ◇ Permanent Resident

## PROFESSIONAL SUMMARY

---

Full stack Software Engineer with experience building scalable, production-ready applications using Java (Spring Boot) and C#.NET. Skilled in designing RESTful APIs, working with relational databases, and deploying cloud-based solutions on Azure. Proven ability to improve system reliability, optimize CI/CD pipelines, and deliver secure, high-performance applications in agile environments.

## WORK EXPERIENCE

---

### Software Developer Co-op

September 2025 - May 2026

Ontario Public Service - Ministry of Public and Business Service Delivery

*Toronto, ON*

- Developed and enhanced full-stack web applications using C#, .NET, Razor Pages, HTML/CSS, and JavaScript, delivering 5+ production features used by three internal business teams.
- Investigated and resolved front-end and back-end defects by debugging application logic and APIs, improving system stability and reducing recurring user-reported issues.
- Implemented PyTest-based automated tests for API endpoints, increasing test coverage from 50% to 80%, validating request/response behavior and prompt templates used in a Retrieval-Augmented Generation (RAG) pipeline.
- Built and maintained CI/CD pipelines in Azure DevOps, automating build, test, and deployment workflows and reducing deployment time from 2–3 hours to under 15 minutes.

## PROJECTS

---

**RememberBirthdays** – Full-stack birthday manager with secure auth and automated email reminders.

[Backend GitHub](#) | [Frontend GitHub](#) | [Live Site](#) | [Architecture PDF](#) | [Demo Video](#)

Tech stack: Java 21, Spring Boot, Hibernate, React, TypeScript, PostgreSQL, Docker, Keycloak, AWS, Terraform, GitHub Actions, Prometheus, Grafana, SendGrid, JUnit 5, Mockito, Jest

- Built RESTful APIs and full-stack services with Java 21, Spring Boot, and Hibernate, supporting CRUD operations and OAuth2 authentication via Keycloak and Spring Security.
- Integrated PostgreSQL for persistence, automated email reminders with SendGrid, and containerized the backend using Docker in a layered n-tier architecture.
- Deployed the application to AWS using Terraform, Docker, and GitHub Actions, automating infrastructure provisioning and application delivery through CI/CD pipelines.
- Implemented monitoring and alerting with Prometheus and Grafana to improve visibility into application health and system performance.
- Wrote 34 unit and integration tests across Spring Boot (JUnit 5, Mockito, H2) and React (Jest, RTL) layers, covering JWT-secured endpoints, repository queries, and async UI interactions.

**UFC Store** – MERN e-commerce platform with authentication and Stripe payments

[GitHub](#) | [Live Site](#)

Tech Stack: React, JavaScript, Node.js, Express, MongoDB

- Built full-stack e-commerce features including JWT-based authentication, admin-restricted product CRUD, and dynamic shopping cart functionality.
- Integrated the Stripe API for secure payment processing and developed RESTful APIs using the MERN stack.

SKILLS

|                  |                                                      |
|------------------|------------------------------------------------------|
| Programming      | Java, C#, Python, Javascript/Typescript              |
| Backend          | Spring Boot, .Net, Node.js, Express.js               |
| Frontend         | React.js, HTML, CSS, Bootstrap, Material UI          |
| Database         | PostgreSQL, MySQL, MongoDB, SQL Server               |
| Cloud and Devops | AWS, Docker, Terraform, GitHub Actions, Azure DevOps |
| Observability    | Prometheus, Grafana                                  |
| Testing          | JUnit 5, Mockito, Jest, React Testing Library        |
| Authentication   | Keycloak, OAuth2, JWT                                |
| Operating system | Linux, Windows                                       |
| Collaboration    | Jira                                                 |
